Importance: High

I fail to see what these figures have to do with the field variance memos for containment and characterization. I got the sense from the response that Amec may try to bring up EBR workplan in the discussion Monday morning. If so, we need to remind AF that EBR is under stop work order and informal dispute and that conversation has been elevated to a higher level. We are only there to discuss the hydraulic containment system and additional characterization workplans and we will not discuss EBR at this time.
